The batteries can be like the batteries you find in flashlights or in regular gasoline cars. To get the battery ready to roll, you have to charge it. This process isn't much different from the way you charge the portable devices you carry around every day: your cell phone, MP3 player, or digital camera. The difference is that you deal with a much bigger gadget that carries you around instead. The electric car is usually plugged in at night. The car can be plugged into a special charging unit even at houses. Some electric cars can be plugged right into a regular electrical wall outlet. Others need a larger outlet, like the kind that a stove or a vacuum cleaner plugs into. The engineers are trying to make better batteries that hold more energy and last longer. To overcome the problem of charging electric cars, hybrid cars are also available. Hybrid cars combine the benefits of gasoline engines and electric motors. They can be designed to meet different goals, such as better fuel economy or more power.	4

۳	متن زیر را بخوانید و به سوالات داده شده در هر قسمت پاسخ دهید. The other day, I was leaving the grocery store when I saw a white man in his late 60's carrying bags also walking towards the exit. I politely asked him if he would like some help. He said sadly, "No thanks. I can do just fine. I'm not as old as you think I look." I was shocked at his response, so I didn't say anything. I was wondering, "What just happened?" I thought he would be pleased to have me help him, that it showed a sign of respect and he would appreciate it.
