**57. Tahereh Saffarzadeh …….....……**

Short Comprehension:

درک مطلب کوتاه: جملات زیر را بخوانید و پاسخ صحیح را علامت بزنید

2

58**. Sharks are not all the same. In fact, there are nearly 400 different kinds. Most sharks never attack people. Only a special group of sharks can be dangerous. They kill an average of forty people every year. Let's compare sharks with snakes. Snakes kill about 60,000 people every year. And let's not forget that people kill 25,000,000 sharks every year.**

We can understand from the above paragraph that ……. .

a) snakes are more dangerous than sharks b) all groups of sharks are dangerous

c) sharks are more dangerous than snakes d) most dangerous snakes never attack people

**S**

59. **The size of the smallest dictionary in the world is about 27×18 mm which needs to be read with a magnifying glass. We can understand from the above sentence that …….**

a) Some dictionaries can be magnified to the size of the world.

b) The size of all small dictionaries in the world is about 27×18 mm.

c) Without a magnifying glass, the world smallest dictionary cannot be read.

d) A magnifying glass with 27×18 mm size can only help us to read dictionaries.

**Passage 1**

4

Renewable energy is often called **green energy** because it is a natural energy, always available and does not have to be formed like nonrenewable energy. The green energy is always there. The five types include solar, energy from the Sun; geothermal, energy from heat within the Earth; hydroelectric, energy from moving water; biomass, energy from dead plants and microorganisms and finally, energy from the wind. Biomass energy comes from the recently living plants or microorganisms. The energy in plants comes from the sun but is still present when it dies. Examples include trees, branches, scraps of bark and recycled paper, as well as garbage, and some crops. The energy comes from burning biomass. Some biomass can be converted into biofuels as its mixed with regular gasoline. As with both renewable and nonrenewable energy sources, there are advantages and disadvantages. In the United States, as of 2016, about 10% of total energy consumption was from renewable energy sources, and about 55% of that use is for producing electricity. One of the most important advantages of renewable energy is its role in reducing greenhouse gases. The use of renewable energy in the U.S. and the world will continue to grow into the future.
